

Volunteer Officer Report February 2020

Callum Inkster – School of Architecture & The Built Environment Rep

What has been worked on in the past month?

This month we have been working on acquiring new materials for the workshop as we have managed to go through quite a lot of them. As well as this we have begun to acquire more extension cords for the studio to make sure that every student, in every year and in every bay has access to a socket to charge their laptop.

Successes from the past month and any Reps Wins

We have managed to figure out what materials are acquired, it is just now getting them added to the budget and purchased. We have decided how many and what extension cords will be required for each part of studio and now just have to acquire them and distribute them in the correct regions.

Plans for next month

Next month, I will be trying to get a large format scanner put into NDH or PDW. So students can scan things larger than A3, which is quite a regular occurrence within the MArch course and final year BArch students.
