

Molly Harper – Architecture and the Built Environment School Rep

During this past month, have encouraged students to fill out the NSS as honestly as possible. Also clearing a few in school problems with modules has been a challenge this month and has took a little time out of other things I would have liked to work on making better, however the problems were resolved.

After the success of the printer an SUGgestion was put in again this time for a pull plotter on west side of AAD this is something we currently don't have. I have pushed to get votes and told tutors to spread the word and luckily we have managed to get just over 50, however I was aiming for slightly more – it has been very challenging to try to get students to vote during the last month due to deadlines looming.

I have attended the rep forum and encouraged course reps to come along as well – during this we discussed the results from the module evaluations and talked about how we could start to improve these. As well as identify some key areas of improvements within certain modules. Also trying to encourage them to get students to vote for the pull plotter

During the next month I hope to clear up a few more in school issues as well as aim to get a slight extension for 3<sup>rd</sup> year students on a technical module which we have missed 2 weeks worth of lectures and seminars for.
