

## Volunteer Officer Report October 2018

Michael Barton – School of Engineering Rep

What has been worked on in the past month?

I have recently had a meeting with the head of the school to discuss plans for the coming year. We are working on formatting a standardised feedback form for lecturers to mark coursework on. This should make sure that everyone receives feedback that they can learn from when implemented. Coursework hand in dates have also been uploaded to Blackboard. The engineering society is back up and running and so should be starting projects and socials soon. Course reps have now all been trained which means we can now start working as a team.

Successes from the past month and any Reps Wins

We have already had people use Coursemate and our course reps have made sure to signpost people in the right direction. As stated previously we have also managed to get coursework hand in dates uploaded to blackboard.

Plans for next month

Within this next month we should have 6 or so high spec computers placed within INB2209. These are so that anyone who needs to do CFD/FEA coursework/research has access to a fast pc which can run ANSYS simulations. We are also looking at buying a few SolidWorks licences so that 3rd and 4th year projects can be done with industry standard CAD software.
