

University of Lincoln Students' Union Volunteer Officer Report
January 2018

Mathematics and Physics School Rep

What has been worked on in the past month:

During the past month, students have been focussing on exams, meaning that there has been little focus on rep work. Following the module evaluations, the collected data will soon be presented to the reps to give an overview of the past semester.

Successes from the past month:

Lecturers have been clear about the resources they were providing for exams and ensured we had final solutions to practicals and exams. Reps from level 2 and 3 are in agreement that vast improvements have been to the first semester since the previous academic year.

Plans for next month:

With the introduction of more regular rep meetings, the efficiency of the rep system in our school will hopefully improve, meaning that any problems can be reported and worked on immediately. The data from the module evaluations will be analysed to present student feedback from the last semester. Some of this data will be relayed to the reps during the upcoming subject committee meeting.

Though the communication from lecturers to students has improved in the past semester, with feedback for assignments being delivered quicker and with more clarity, we will continue to work on this in the new year. We will work on ensuring students are aware of what is expected of them for each assignment and what is being assessed for their final grade by improving communication from lecturers via Blackboard or email.
